- From the ground up to 10.2 meter high. Lateral or penetrating damp is usually from a source to difficult to control and only an expert with a moisture meter detector will evaluate the difference in rising and lateral damp. Sometimes the problem may also require a plumber to pressure test the pipes to laminate the mass the problem.
- Basement Waterproofing refers to techniques used to prevent water from entering the basement of a house or other building. Effective below ground water proofing will include both drainage and sealers.
- Waterproofing is, need anytime a structure is built at ground level or below ground . Waterproofing and drainage considerations are especially needed in cases where groundwater is likely to build up in the soil and raise the water table. This higher water table causes hydrostatic pressure to be exerted underneath basement floors and against expansion and contraction of the footing– foundation will joint and up through floor cracks. Hydrostatic pressure can cause major structural damage foundation wall and is likely to contribute to mold, Decay and other moisture.

- INNOVATIVE PRODUCTS
- PRAVEEN ASSOCIATES able to do work out country. Our mainly products for the protection precious for the protection of precious building structures from detrimental salts and water inside basements. (Under grade structure) and outdoor are our strong point.
- PRAVEEN ASSOCIATES, offers intelligent systems for state of the art repair and restoration methods. Close cooperation between Research & Development. Production and Sales Guarantee constant, high standards complying with growing demands.
-
-
- Our Mission
- Our Mission is to make awareness about pros and cons to construction due to conventional and other methods of water proofing adopted in our country which affects the structure resulting into leakage, deterioration and carbonating,
- Our Vision
- Our vision is to educate the real meaning of Water Proofing and bring awareness of effectiveness which can only be achieved by adopting a correctly prescribed method after diagnosis of the case / location and conditions of site for suitability of correct method and material to be adopted for waterproofing purpose technically.

OUT TARGET

Our target is to achieve and deliver success to the end users of construction industry who spend their hard earned money once or twice in life time for their personal use of premises.

Their meticulous efforts and dedication have helped us in achieving the various goals and objectives laid down by the organization.

Over the years, we have emerged as a PRAVEEN ASSOCIATES WATERPROOFING COMPANY grouting and structural repairing service provider. Quality waterproofing services, sound strategies and client oriented policies are the attributes that make us stand averred of our counterparts in the industry. Some of the attributes are:

Service Portfolio

Our vast domain expertise enables us to provide our clients with high quality PRAVEEN ASSOCIATES WATERPROOFING COMPANY Quality being our forte, our team members pay utmost attention to rendering only the flawless services to the clients. Furthermore, all these services are widely acclaimed in the market for their timely execution, promptness, reliability and effectiveness. All these reliable waterproofing services are executed within the promised time period. Our services comprise the following:

Categories	Services
Waterproofing Services	<ul style="list-style-type: none"> • A.P.P. Membrane Waterproofing services • Injection waterproofing service Grouting • Memtations waterproofing service • Bituminous waterproofing services • Terrace waterproofing • Epoxy coating • Exterior wall waterproofing services • Basement waterproofing service • Insulation, expoxy flooring • Pipeline Wrapping coating & form concrit foam, painting work . Core cutting. Rebearing etc Jobs.

Damp Proofing

Damp proofing in construction is a type of waterproofing applied to building foundation walls to prevent moisture from passing through the walls into interior spaces. Damp problems are one of the most frequent problems encountered in homes.

A complete survey by one of our trained surveyors, aided by an electronic moisture meter, will determine the extent and cause of the damp problem. A complete and proper recommendation is only given after a thorough investigation.

We have treated all types of damp professionally for the past 10 years.

Rising Damp

Rising damp in buildings may be defined as the vertical flow of water up through a permeable wall structure or floor, the water being derived from ground water. The water rises through the pores (capillaries) in the masonry or concrete by a process loosely termed "capillarity." In other words the masonry acts like a wick.

The treatment method will depend on whether the rising damp is affecting a solid floor, or is rising up a wall (as shown on the photograph).

Treatment of rising damp on solid floors:

This happens most regularly where developers have failed to fit DPC sheeting beneath the slab or when an existing dpc has failed. Several new products are now available to stop damp rising through floor slabs, notably epoxy floor coating and dry base vapor membrane. Where the floor slab is contaminated (e.g. oil stains or bitumen) or hydrostatic water pressure is excessive it may be necessary to lay CDM industrial membrane over the slab after which a new screed or wooden flooring can be fitted over the membrane.

Treatment of rising damp in walls:

Dry zone damp-proofing cream, or microbial IDPC
